# About us:

At **Ecosure Pulpmolding Technologies Ltd.**, we have been pioneering pulp-molding solutions for over two decades. Starting as one of India's first manufacturers of pulp-molding machines, we have continually pushed the boundaries of engineering and sustainability. Our expertise in turning agricultural residues into high-strength, eco-friendly products has made Ecosure a trusted partner for businesses worldwide.

Building on this legacy, we launched **T9GREEN**, our own brand of biodegradable tableware. Produced in **Ecosure's** state-of-the-art facility, **T9GREEN** offers a full range of compostable plates, bowls, trays, and cups designed to replace single-use plastics. Each product is crafted on precision-engineered **Ecosure** machines, ensuring durability, leak-resistance, and a premium finish.

Our mission is clear: to lead the transition from plastic to planet-friendly alternatives. With **T9GREEN**, we combine Ecosure's decades of innovation with modern design, delivering tableware that is safe, sustainable, and stylish—helping consumers and businesses alike make a positive impact from farm to table.

# Why Choose Us:

## Unmatched Product Quality

Our tableware is produced on precision-engineered pulp-molding machines, delivering consistent strength, leak-resistance, and a smooth finish that rivals plastic alternatives.

## True Sustainability

Made from 100% renewable agricultural fibers, our products are fully compostable within 90 days in industrial facilities—eliminating landfill waste and reducing plastic pollution.

## Food-Safe & Chemical-Free

We use no plastics, chlorine, or synthetic coatings. All items are FDA- and EU-approved for direct contact with hot, cold, oily, or acidic foods.

## Custom Branding & Design

Elevate your brand with embossing or printing directly on the fiber surface. Choose from a variety of shapes, sizes, and compartment layouts to suit your specific needs.

## Scalable & Reliable Supply

Backed by our in-house manufacturing capacity, we can handle orders ranging from boutique batches to mass-market volumes, ensuring on-time delivery and consistent quality.

## Cost-Effective Manufacturing

Our proprietary machines optimize raw-material use and energy consumption, passing cost savings on to you without compromising on performance.

## Comprehensive After-Sales Support

From initial technical guidance to ongoing maintenance and spare parts, our dedicated service team ensures your operations run smoothly.

## Circular-Economy Focus

Beyond composability, we recycle process water, convert production offcuts into green energy, and offer take-back programs to close the loop on material life cycles.

## Industry Expertise

With years of experience in pulp-molding technology and a deep commitment to eco-innovation, we're not just a supplier—we're a partner in your sustainability journey.

100% Compostable &  
Biodegradable

100% Food-Safe &  
Chemical-Free

100% Sugarcane  
Virgin Pulp

100% Safe to use in  
Microwave

# How is it Made

## T9Green Plates – Made in India, on Made in India Machines

Every T9Green plate is more than just tableware—it's a symbol of India's innovation and sustainability. What makes our plates truly unique is that they are Made in India, on Made in India machines. Our parent company, Ecosure Pulp molding Technologies Limited, is one of the country's leading manufacturers of pulp-molding machines, designed and built right here in India.

The process begins with local agricultural residues such as bagasse and wheat straw, which are pulped into a fine fiber slurry. This pulp is fed into Ecosure's indigenously engineered molding machines, where high temperature and pressure shape it into strong, lightweight plates. After trimming, drying, and quality testing, the plates are ready—safe for food use, free from plastics or harmful chemicals, and 100% compostable.

By producing T9Green plates on Indian-made machines, we not only reduce import dependence but also create a product that embodies the spirit of Atmanirbhar Bharat. Each plate reflects the strength of Indian engineering, the responsibility of sustainable manufacturing, and the pride of offering eco-friendly alternatives to plastic—made in India, for the world.

100% Compostable & Biodegradable

100% Food-Safe & Chemical-Free

100% Sugarcane Virgin Pulp

100% Safe to use in Microwave

# Impact of Switching to T9Green Plates

## 1. Plastic Waste Saved

- A typical plastic disposable plate weighs around 10–12 grams.
- If you replace 1 million plates with T9Green, that's roughly 10–12 metric tons of plastic waste avoided.

## 2. Carbon Emissions Reduced

- Producing 1 kg of plastic emits around 6 kg of CO<sub>2</sub>.
- So, avoiding 10 tons of plastic = ~60 tons of CO<sub>2</sub> emissions saved.
- That's equivalent to:
  - Driving a car for 2.5 lakh km (about 6 times around the Earth).
  - The annual carbon absorption of 3,000 mature trees.

## 3. Compostable Advantage

- Unlike plastic, T9Green plates biodegrade in 90–120 days, leaving zero microplastics.
- They also utilize agricultural residues, preventing open-field burning, which itself is a major source of carbon emissions.
